TYRE PROTECTOR REDUCING PUNCTURES

Conconcreto is a civil and mining works company and runs a fleet of five International 7600 dump trucks which are used to transport aggregates and various materials.

In October 2009, we installed **Tyre Protector** on 10 tires (size: 12R22.5) to try and reduce the number of punctures.

Since the installation, we have not had any punctures, which has meant greater availability of our equipment, increased productivity and minimal inconvenience to our customers of machine downtime.

We have also extended the application of Tyre Protector to our skid steers, which have been experiencing frequent downtime due to punctures at a hospital construction site.

Sincerely,

ING. MANUEL E. GARZON.
